EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Rex Hwang, Registration No. 56,206 on 1/27/2009.

In the claims, amend claim 1 and 19 as follows:

In claim 1, delete "executed by a processor" in line 3, and insert "a microprocessor executing" at the beginning of line 3.

In claim 19, delete "user" from the phrase "rendering a video controller user" in line 16.

In the Abstract, delete the second paragraph beginning with "This description is not intended to be a complete description..." and ending with "...a review of the specification, the figures, and the claims."

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The Examiner deems Shen et al. (US 2004/0221322 A1) hereinafter Shen, Tomita et al. (US 2003/0090495 A1) hereinafter Tomita, Plow et al. (US 6,429,883 B1) hereinafter

Plow, Smith (US 5,933,141), and Frank et al. (US 5,651,107) hereinafter Frank, Takata et al. (EP 0990998 A2) hereinafter Takata, Doner et al. (US 5,598,557) hereinafter Doner to be relevant prior art. Independent claims 1, 19 and 29 when considered as a whole, are allowable over the above mentioned prior art of record. Specifically, none of the prior art of record either alone or in combination teach or suggest a browsing component software application that renders a keyword query text box in a first area of the display screen, multimedia contents in a second area of the display screen and a video controller in a third area of the display screen wherein the multimedia contents are rendered on overlapping content layers within the second area of the display screen, the content layers comprising a first content layer that renders query results, a second content layer that renders keyframes, and a third content layer that renders videos, wherein the content layers always overlap each other in totality throughout the entire area of the second area of the display screen. Moreover, when considered as a whole, none of the references alone or in combination teach or suggest that the browsing component further renders a transparent widget layer wherein the transparent widget layer independently, interactively and continuously adjusts the degree of transparency of two or more of the content layers via an input device. Shen being the closest prior art teaches browsing multimedia content on a mobile device wherein a user can browse query results, keyframes and video contents on the mobile device. However, Shen does not teach that the browsing software application displays a query box in a first area of the display screen, multimedia contents in a second area of the display screen, and a video controller in a third area of the display screen. He also does not teach displaying

the query results, keyframes and video contents on separate overlapping content layers within the second area of the display screen, wherein the content layers always overlap each other in totality through the entire area of the second area of the display screen. Additionally he does not teach that the browsing software application further renders a transparent widget layer wherein the transparent widget layer independently, interactively and continuously adjusts the degree of transparency of two or more of the content layers via an input device. Among the other prior arts of record, Plow teaches displaying contents in layered windows and using a widget in the form of a transparency button on each of the layered windows to change the transparency values of each of the layered windows individually. However, Plow does not teach a multimedia browser application, and a transparent widget layer for changing the transparency of multiple layers independently. Smith teaches transparent widget layers but his transparent widget layer is not used for changing transparency of multiple layers of content. Thus neither Plow, nor Smith or any other prior art of record cures the deficiencies of Shen. Therefore, independent claims 1, 19 and 29 are considered allowable based on the prior art of record, and also the dependent claims are likewise allowable for further defining the patentable subject matter of their respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
